Olivia Connelly – Peer Assessment for Project

Please evaluate your team member thoughtfully. Provide honest feedback based on your experience working with them.

Team Member 1: Andre DosSantos
Preparation: [How well did they come prepared for meetings, tasks, and discussions?]

Andre was always prepared every time we needed to meet. He would always come with questions about design ideas for the project which allowed us to quickly find what direction to take our project. He would also always show up to meetings with everything set up to start being implemented so that we could work on one computer easily.

Contribution: [Quality and quantity of work contributed to the project]

Andre focused mainly on the backend and programming side of the project, which was extremely helpful. This allowed us to forgo the use of Github Desktop and avoid issues with pushing commits at the same time. He would be quick to notify me if there were issues with the designs I had laid out and he was extremely helpful and reliable throughout the entire project.

Respect for Others' Ideas: [How well did they listen to and consider others' suggestions?]

For this project, I focused mainly on the design and documentation side. Andre was very attentive with the designs and instructional documents I would make and would actively communicate with me while implementing these designs. He would always consider my designs and would refer back to me if there were issues with the designs or he felt that there was a better option or approach.

Flexibility: [Ability to adapt to changes, handle challenges, and collaborate effectively]

Andre was incredibly flexible as we had to drastically change our project multiple times since the beginning. As we worked to implement more and more things into the project, Andre was extremely collaborative with me as to how we should implement new changes, such as different interactions, and how we would respond to feedback. Overall, he was a great partner to work with and allowed us to both work to our strengths and create an effective dashboard.
